

# DEVELOP A CULTURE OF PUNCTUALITY & PRODUCTIVITY WITH SYNCRIGHT CLOCKS

## GET SYNCHRONIZED NOW

All SyncRight Clocks show exactly the same, correct time.

## THE VALUE OF SYNCHRONIZED TIME

Once SyncRight replaces your wall clocks, your organization will be governed by one common and correct time reference. This develops a **culture of punctuality and productivity** among your people. They will become more time-conscious and more efficient. They will start working with a **sense of urgency**, which increases your profits.

---

*Have the right time, the same time,  
everywhere, every time,  
with SyncRight Clocks.*

---

### Q: How do they work?

A: Each SyncRight Clock comes with a small antenna that receives time signals transmitted by GPS satellites.

### Q: Why are they perfectly synchronized?

A: GPS time gains or loses just 1 second every 100,000 years. As a result, all SyncRight Clocks are always correct, perfectly synchronized, and will never need adjusting, ever.

## A RECENT SUCCESS

When a major semiconductor company needed 100% accurate clocks, they called us.

Their wall clocks were not synchronized. Some were a few minutes late, others a few minutes advanced. This was unacceptable, as the majority of their activities are **time-critical**.

With **SyncRight** replacing their wall clocks, they now have 100% accurate and synchronized clocks that they can rely on, ***all the time.***

## EACH CLOCK SYNCs INDEPENDENTLY VIA GPS

Traditional multi-clock solutions use a master-slave configuration. Every slave clock must be wired to the master, which is expensive and difficult to install. In contrast, SyncRight Clocks are far cheaper and are far easier to install since they independently receive the time transmitted by GPS satellites.

## PRECISE AND ACCURATE

SyncRight Clocks display GPS time – a worldwide reference for the correct time. Even aircraft use GPS time, since it gains or loses just one second every 100,000 years. This is why SyncRight Clocks always show the right time, the same time, everywhere, every time.

## AVAILABLE IN MULTIPLE SIZES

Big clocks are ideal for big areas, small clocks for small areas. SyncRight Digital Clocks come in 1.5, 2.3, 5, 7, and 12-inch-tall LED display heights. They are easily readable from distances of 50, 75, 165, 233, or 400 feet respectively. Even larger clocks can be custom-built to your specifications.

## TRIED, TESTED AND PROVEN

SyncRight Clocks have passed rigorous tests conducted by DOST-PAGASA, the country's official timekeeper. It is the only certified accurate “**Philippine Standard Time Clock**” in the market today. And since 2001, thousands of corporations, government agencies, and schools and universities nationwide have replaced their wall clocks and their outdated master-slave clock systems with SyncRight.

## LOCALLY MADE, LOCALLY SUPPORTED

All other synchronized clock systems are imported and after-sales services, which can be costly, must come from abroad. This wastes time and money. In contrast, SyncRight clocks are made in the Philippines. As the manufacturer, we provide full local warranty, technical support and after-sales services.
